

Max Bahar

Jakarta, Indonesia (July 2026) | max-zjh-the.github.io | linkedin.com/in/max-bahar

EDUCATION

Harvard University

Graduated: May 2026

M.S. Data Science

Coursework: Advanced Data Science, Machine Learning, Design of Experiments, Math Modeling, Real Estate Finance

Boston College

Graduated: May 2021

B.A. Economics and Computer Science | Phi Beta Kappa | Semester Abroad: UCL

Coursework: Algorithms, Econometrics, Game Theory, Labour Economics, Development Economics, Health Economics

SKILLS

Analytics: Machine learning, causal inference | **Tools:** Python, SQL, GIS | **Domains:** Real estate, fintech, geospatial

PROFESSIONAL EXPERIENCE

Alam Sutera Realty

Sep 2025 – Jan 2026

GIS Intern, Legal Department

Tangerang, Indonesia

- Led an assessment of a 14-year-old GIS platform, mapping workflows across 3 departments and interviewing stakeholders, to identify data quality and usability barriers limiting adoption; presented recommendations and a digital transformation roadmap to company directors.
- Designed and implemented the company's first data governance framework for land data, including a data dictionary, field validation logic, and cross-departmental policy workflow, driving a reduction in missing data from ~80% to ~10% across a ~20,000-record land parcel database.
- Identified a critical gap in the legacy platform's functionality, scoped and built a web-based GIS application adopted across 3 teams, replacing a manual mapping workflow and supporting 20-30 land acquisitions per month.

GoTo Financial (GoPay)

May 2025 – Aug 2025

Data Science Intern, Risk Team

Jakarta, Indonesia

- Structured a tradeoff analysis between user friction and fraud detection performance for a QRIS scam detection system processing 3M+ transactions/day; presented threshold recommendations to the Risk business team that reduced incorrectly blocked transactions by 58.6% while sustaining scam detection rates.
- Engineered a large-scale feature set in Python and SQL integrating transactional, geographic, and identity signals; documented and shared query optimization techniques that were adopted across a team of 8 analysts and data scientists.

Caliper Corporation

Jul 2021 – Jun 2024

Analyst, Maptitude Mapping Software

Boston, USA

- Served as the primary analytical contact for Fortune 500 clients including Amazon, Wayfair, and Assa Abloy, scoping and executing market analyses (territory management, route optimization, heat mapping) and presenting findings directly to client stakeholders.
- Authored a geographic market analysis of the Albertsons-Kroger merger, mapping competitive overlap across ~40 subsidiary brands, estimating that 56% of the US mainland population lives within 5 miles of a combined store location.
- Identified a structural problem in how the company delivered client training (low engagement in 8-hour classroom sessions), proposed a new model to leadership, and piloted use-case-specific onboarding sessions for major accounts; new format was adopted company-wide and improved platform adoption across 100+ users, including Optum.

SELECTED PROJECTS

Data Science Capstone: Social Media Marketing Funnel Analysis

Jan 2026 – May 2026

Harvard University, in partnership with Pillar (YC-backed)

- Delivered a data-driven analysis of the social media marketing funnel for a creator commerce platform, identifying call-to-action design as a stronger driver of engagement than audience size across digital product click-through rates, inbound messages, and webpage traffic.

Predicting Voter Turnout in Massachusetts using Demographic Data

Sep 2024 – Dec 2024

Harvard University | max-zjh-the.github.io/voter-turnout-MA

- Found income, language, ethnicity, and age to be the primary demographic drivers of voter turnout in Massachusetts; deployed findings as an interactive web-based data product with county-level predictions.

Long-term Effects of Parental Migration on Income: Evidence from Indonesia

May 2021

Boston College | [Paper](#)

- Used 21 years of Indonesian household panel data (~22,000 individuals) to estimate the long-term income impact of parental migration on children, applying causal inference methods to isolate the effect from confounding factors.

ACTIVITIES & LEADERSHIP

Harvard Graduate Advisory Council: Co-Chair; planned and executed community programming for 150+ graduate students, including alumni speaker series, research talks, community dinners, and end-of-semester celebrations.

Boston College Masti: Co-Captain; led rehearsals and annual productions of a Bollywood-fusion dance team.
